# TARJETAS PARA BINGO

# Fotosíntesis

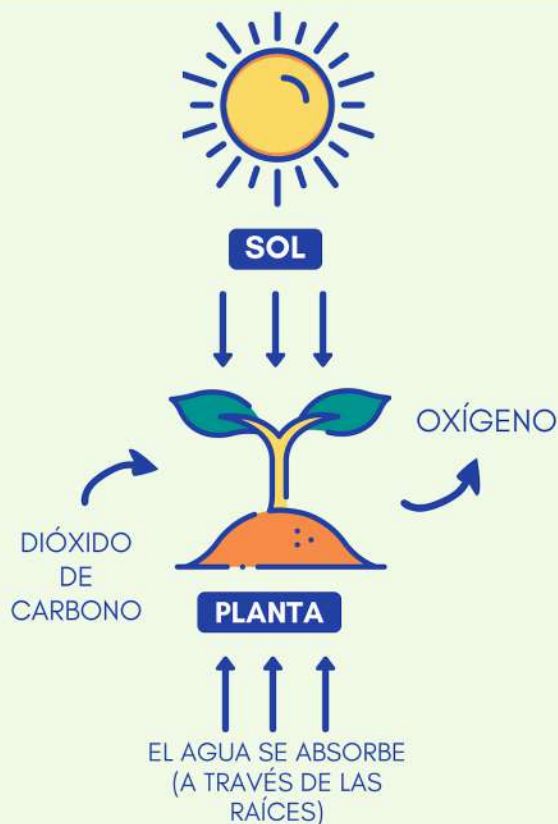

LA FOTOSÍNTESIS ES EL PROCESO EN EL QUE LAS PLANTAS TRANSFORMAN LA ENERGÍA LUMINOSA EN ENERGÍA QUÍMICA. LAS PLANTAS USAN ESTA ENERGÍA PARA PRODUCIR SU PROPIO ALIMENTO. LA ENERGÍA LUMINOSA QUE CAPTURAN SE USA PARA CONVERTIR EL DIÓXIDO DE CARBONO, EL AGUA Y LOS MINERALES EN OXÍGENO.

## CLOROFILA

EL PIGMENTO QUE LES DA A LAS PLANTAS SU COLOR VERDE Y FAVORECE EL PROCESO DE LA FOTOSÍNTESIS.

## SABÍAS QUÉ...

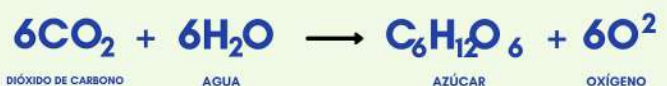

HAY ORGANISMOS DISTINTOS A LAS PLANTAS QUE PUEDEN LLEVAR A CABO LA FOTOSÍNTESIS. ALGUNOS DE ELLOS SON LAS ALGAS Y LA BABOSA CONOCIDA COMO ESMERALDA ORIENTAL.

## EL PROCESO DE LA FOTOSÍNTESIS

LAS PLANTAS ABSORBEN EL AGUA Y EL DIÓXIDO DE CARBONO PARA CONVERTIRLA EN ALIMENTO USANDO LA ENERGÍA DEL SOL. DENTRO DE LA CÉLULA VEGETAL, EL AGUA SE OXIDA, PIERDE ELECTRONES Y SE CONVIERTE EN OXÍGENO. EL DIÓXIDO DE CARBONO SE REDUCE, GANA ELECTRONES Y SE CONVIERTE EN GLUCOSA. EL OXÍGENO SE LIBERA Y LA GLUCOSA SE ALMACENA DENTRO DE LA PLANTA COMO ENERGÍA.

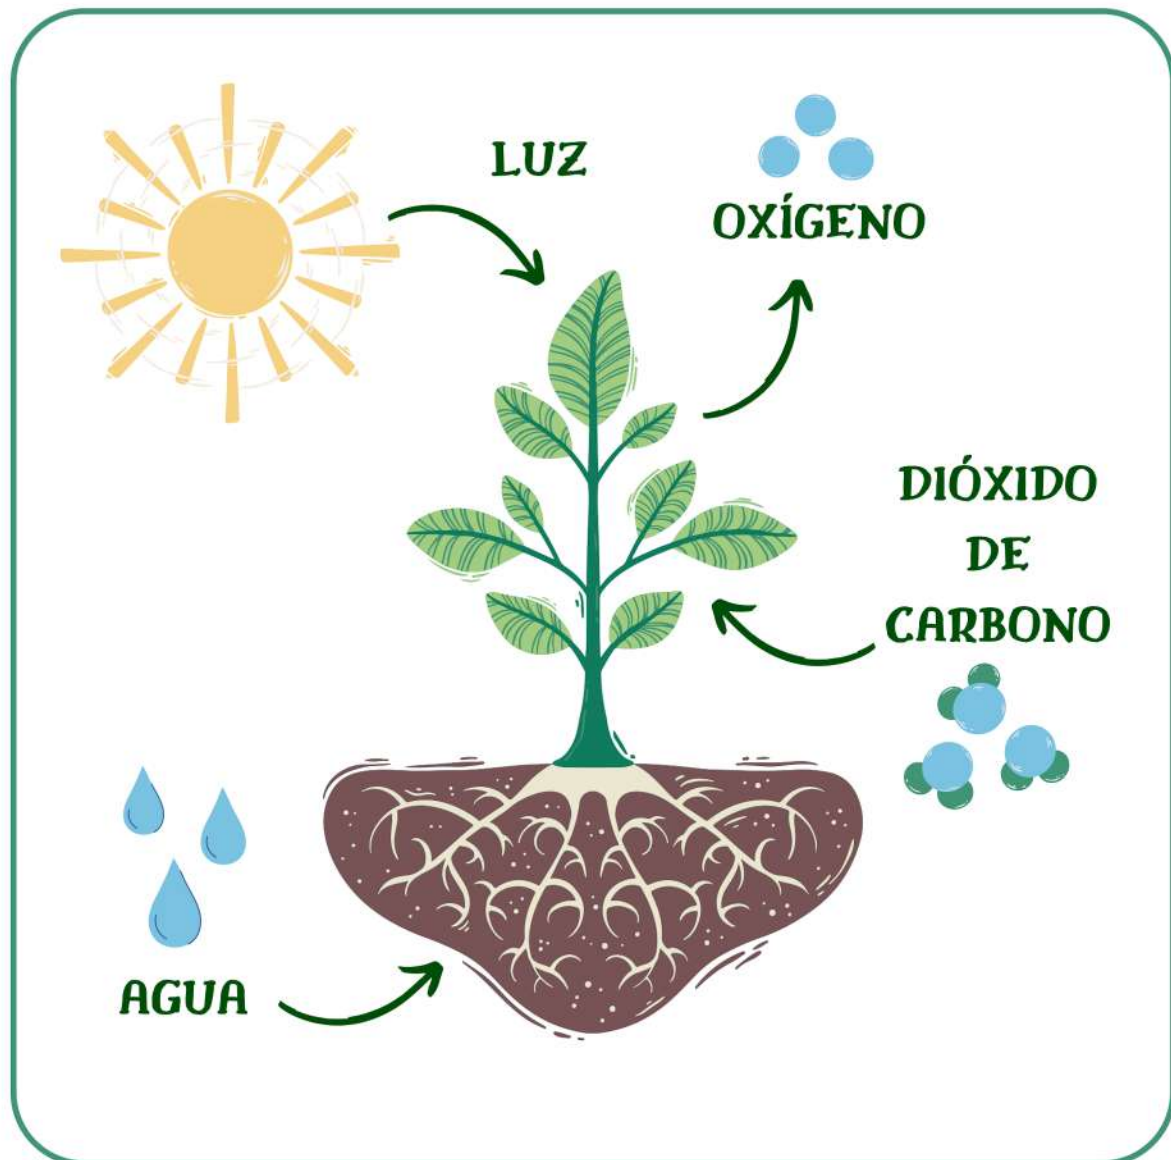

## LA FÓRMULA DE LA FOTOSÍNTESIS
